| | Комментарии: в негативных классах для first name и логин не стал указывать (-беск-1) и (65- +беск) для другой раскладки, чисел и спец символов, потому что если система не "скушала" 65 (или 1) валидных символов, то мне кажется, что не стоит рассчитывать, что она скушает 65 (или 1) невалидных символов. | В негативных граничных значениях значения выделенные жирным шрифтом повторно не тестируем, позитивные тесты уже покрыли | | | |
